

Quantum.Silver for Cattle and Sheep – Antimicrobial

Reg No: Act 36/1947 V35052

A new generation product, using the Quantum Dot technology to produce a natural silver product with micro-cidal effects, which may aid in the prevention/treatment of infections:

1. Viral, Bacterial, Fungal and Protozoa e.g. Cryptosporidium
2. Quantum.Silver® is also an anti-inflammatory.

Mode of action: Due to the very small size of the nano particles, the Silver atoms are taken up into the bloodstream and target microbes. They denature Viruses or prokaryotic bacteria by attracting electrons from their DNA/RNA and breaking the OH bonds. This gives the animals a chance to overcome the infection.

Packaging:

1, 5, or 25 Liter solution
QS Premix 5kg

Dosage: Individual animals: 1 ml per kg body mass 2 x daily for 5-7 days or
2 ml/kg once daily for a few days

The Quantum Silver may be added to milk or drinking water for ease of administration
Feedlots: Add QS Premix at 400g/ton of final feed (1g Premix/100kg body mass daily)

Withdrawal period:

Due to the very nano- size of the silver particles, it is excreted quickly and therefore has no meat withdrawal period.

Side effects: There are no known side effects for Quantum.Silver
